

Interesting Case Conference 5/27/21

1. Cardiac Myxoma

- a. What is the best Dx?
- b. What is the most common location for this lesion? (Left atrium)
- c. What is the usual behavior? (Benign, rare recurrence)

2. Intimal Sarcoma

- a. Diagnosis?
- b. What molecular abnormality is often present? (MDM2 amplification)
- c. What is the usual behavior? (Malignant, aggressive)

3. Cardiac Papillary Fibroelastoma

- a. Diagnosis?
- b. What genetic mutation is sometimes present? (KRAS)

4. Cardiac Sarcoidosis

- a. Diagnosis?
- b. What is a common presentation? (Conduction problems and arrhythmias)

5. Acute Myocardial Infarction (with reperfusion)

- a. Diagnosis?
- b. What intervention did they likely have? (reperfusion)
- c. How long ago did the infarction occur? (<2 days)
